

YOUR TOTAL ENERGY PICTURE WITH APOLLO360

Knowing your solar production is only half the picture—what about your energy consumption? Electric Vehicle impact on total consumption?

A major change is coming to the solar world. The widespread deployment of electric vehicles changes everything for the residential solar market. At present, there are plenty of ways to see your solar production....inverter companies already provide that.

But what about your home's energy consumption? And what about the load your electric vehicle adds to that total? For the first time, you are now able to see all your home energy information in one place: introducing the Apollo360 from SunReports. And you can view the performance of your Solar hot water system too!

The SunReports design philosophy is to "make energy simple". Simple to install, simple to use, and simple to understand. Simply powerful.

Solar PV Performance Monitoring

- Inverter direct connection
- See Solar PV performance from any web-enabled device

WholeHome Energy Consumption

- View the energy consumption of the home—and compare it to the solar PV production
- Easy to understand graphics help user manage their energy consumption

Electric Vehicle Charging Load

- What is the impact on the energy picture with an electric vehicle in the mix?
- See when the charging occurs, and manage your charging station with your total energy picture in mind

Solar Hot Water Too!

- From the same device at the same time, only SunReports offers solar PV and solar Hot Water performance monitoring

Keep Track of the Over/Under

- Use SunReports Apollo360 to keep track of the score with the Utility—do you owe them money or do they owe you money?
- Upload and compare your utility bills with your own system information

SunReports Apollo Units Are:

- Simple to install with ZERO configuration
- Affordable
- Able to monitor Solar Thermal (HW) and Solar PV (Electric) at the same time
- Useful for providing Revenue Grade monitoring for enphase inverters
